Mike Dorsey mentioned that a local resident sold property to diversified and then places complaints till they can run whatever company bought it out of town. WV DEP does investigate the reports each time.

Dennis and Melissa –

Just a FYI since this was an odor complaint. The attached NRC Report came in last night regarding a licorice odor in a storm drain in St. Albans, Kanawha County, WV. The WVDEP Spill Line had received the NRC Report as well as other notifications through their own Spill Line. They had discussed the situation with WVDEP and although they don't believe it to be anything – they were having the local volunteer Fire Department check things out. They did not believe it was associated with the Freedom Industries chemical spill
